

ABSTRACT OF THE DISCLOSURE

The present invention relates to a gaming device with a bonus scheme including a plurality of groups of symbols and a plurality of bonus value outcomes and at least one win-group outcome associated with the symbols. The win-group outcome corresponds to a plurality of the bonus value outcomes. A player can select symbols and gain bonus values while advancing from group to group. If a player reaches a win-group outcome, the player receives all of the bonus value outcomes which correspond to the win-group outcome.
